

WILDFIRE SEASON IS HERE – CONSIDER BETTER HOME PROTECTION

FIRESCAPE YOUR PROPERTY

Around your home you have **three zones**. Each requires a different level of **fire prevention treatment**. Here are a few ways you can work with each zone:

Zone 1: 0 to 5 ft

- Landscape your property using noncombustible materials like rock, cement, sand, stone pavers, gravel or dirt
- Clear your roof and rain gutters of any leaves or needles
- Keep tree branches 10 feet away from your chimney and remove any dead branches that are on top of or touching your roof

Zone 2: 5 to 30 ft

- Avoid extensive use of mulch
- Regularly inspect the foliage around your home and remove any dead plants, grass or weeds
- Keep all wood piles, gas or propane tanks and charging stations outside of the home

Zone 3: 30 – 100 ft

- Do not let your grass grow higher than 4 inches
- Leave spaces between grass, shrubs, and trees
- Select low-growing landscaping like vegetables, succulents, flowers and grass

Landscape to protect your family, neighbors and real estate.
